Answer Key!

Perpendicular

⊥

Parallel

||

Perpendicular

⊥

$$\overline{AB} \quad y = \frac{4}{3}x + 2$$

$$\overline{CD} \quad y = \frac{4}{3}x - 2$$

$$\overline{EF} \quad y = -\frac{1}{4}x + 1$$

$$\overline{GH} \quad y = -\frac{1}{4}x - 2$$

*If two lines in the same plane have the same slope, then they are parallel.

*If two lines in the same plane are parallel, then they have the same slope.

SAME SLOPE → PARALLEL

$$\overline{AB} \quad y = 3x + 5$$

$$\overline{CD} \quad y = -\frac{1}{3}x + 1$$

$$\overline{EF} \quad y = \frac{1}{4}x - 1$$

$$\overline{GH} \quad y = -4x + 4$$

*If two lines in the same plane have slopes that are negative reciprocals, then they are perpendicular.

*If two lines are perpendicular, then their slopes are negative reciprocals.

NEGATIVE RECIPROCAL SLOPES → PERPENDICULAR

$$\overline{AB} \quad y = \frac{4}{3}x + 2$$

$$\overline{CD} \quad y = \frac{4}{3}x - 2$$

$$\overline{EF} \quad y = -\frac{1}{4}x + 1$$

$$\overline{GH} \quad y = -\frac{1}{4}x - 2$$

*If two lines in the same plane have the same slope, then they are parallel.

*If two lines in the same plane are parallel, then they have the same slope.

SAME SLOPE → PARALLEL

$$\overline{AB} \quad y = 3x + 5$$

$$\overline{CD} \quad y = -\frac{1}{3}x + 1$$

$$\overline{EF} \quad y = \frac{1}{4}x - 1$$

$$\overline{GH} \quad y = -4x + 4$$

*If two lines in the same plane have slopes that are negative reciprocals, then they are perpendicular.

*If two lines are perpendicular, then their slopes are negative reciprocals.

NEGATIVE RECIPROCAL SLOPES → PERPENDICULAR
