$$4x + 3 = 15$$

$$\frac{x}{4} - 3 = 7$$

$$\frac{x + 3}{4} = 7$$

Cut & Throw Away

Solving Two-Step Equations

Example 1:
$$4x + 3 = 15$$

Example 2:
$$-5x + 10 = 75$$

Example 3:
$$\frac{x}{4} - 3 = 7$$

Example 4:
$$\frac{x}{-3} + 9 = -4$$

Example 5:
$$\frac{x + 3}{4} = 7$$

Example 6:
$$\frac{x - 2}{-7} = 3$$

Step 1: Photo copy the pages front to back.

Step 2: Cut along the dotted line at the bottom and throw that piece away.

Step 3: Cut on the short dotted lines.

Step 4: Fold over the side with the squares so that they are just above/ to the right of the title "Solving Two-Step Equations".
